For example, this article can be really helpful for those who are new to the site.This invention relates to heaters for heating food or other items and more particularly to a portable heater having a fuel tank and an auxiliary heater element with air passages that allows the main body of the heater to self-vent. It is known to heat food in a container using an elongate heating element that extends into the container. For example, it is known to wrap a round wire around a plate and then to slide it into an open top glass container. One end of the wire is soldered to the plate and the other end to a flat sheet of metal that can be bent or folded to form a cover for the container. Food is often cooked in order to keep it 0cc13bf012
