Insulin-like growth factor receptor 1 in human and rat granular pneumocytes is regulated by a phosphatidylinositol 3-kinase-dependent mechanism. We examined the possible effect of insulin-like growth factor receptor 1 (IGF-R1) activation on cell proliferation and growth in human and rat granular pneumocytes. The antibody 9.6.B

---

(anti-IGF-R1) specifically recognized a 170 kDa IGF-R1 complex, which in human granular pneumocytes was up-regulated within 10 min of incubation with insulin and down-regulated by 6-36 h when IGF-I was added in concentrations from  $10^{-10}$  to  $10^{-8}$  M. The effect of IGF-I on its own receptor was dose dependent and correlated with DNA synthesis. Inhibition of protein kinase C by 1-(5-isoquinolinesulfonyl)-2-methylpiperazine (H-7) or staurosporine (200 nM) decreased IGF-I-induced stimulation of IGF-R1 down-regulation and DNA synthesis. Conversely, pret
