In .NET 4.5, there's an AllocUnbounded method that can allocate a memory block that will be used as soon as there are available memory blocks, but only up to the amount of available memory. I would like to know how to do the same thing in a pre-4.5 project (preferably using the 4.0 framework, but whatever) using unmanaged memory. In order to illustrate my question, the following code should print "allocated" to the console when starting the program, but it prints "unallocated" once I run out of memory. I have no idea how to allocate a larger memory block when there's no memory available. // pre-4.5 var uint64 startMem = Environment.ExpandEnvironmentVariables("%SystemRoot%\LowMemory\allocated"); var uint64 startUnbounded = Environment.ExpandEnvironmentVariables("%SystemRoot%\
