Unzip, copy and then paste the Folder Watch Dog folder (x86\_6300.zip) into the folder Windows\system32 (or Windows\system32\Resources) and run the Folder Watch Dog executable. Done. Best regards. -----

----- This is an attempt to make my signature line easy to see! Please click to read! This is a portable,

---

free, useful, and effective security utility designed for quick and easy use. It is also able to protect certain system files. The new Folder Watch Dog version 7.0.1.0 is fully compatible with Windows Vista 64-bit operating system and compatible with Windows 7 64-bit operating system, which can protect your important folders and files. So, a software that you need is here. It is simple and easy to use. Just run the executable, select the folders you want to protect, then click the "Start" button to start the program running automatically. The program will not let you copy the protected folders to a different location, nor will it let you open them. In addition,

---

the program can be easily removed by clicking the "Uninstall" button, and it will not mess up the system because it doesn't need to write into the registry. Then, the program will set a password protection on the selected folders, so that no one else will be able to access them. When you run this software for the first time, you will be asked to choose an action mode. You can choose to start the program immediately, which will start protecting the folders and files, or you can choose to protect folders and files first, then start the program later, so that it can save you some time. In the former mode, you will be asked to set up the folder password. If you choose to setup

---

the password first, simply click the "Setup" button and then you will be prompted to choose the items to protect and the
