specific application, open a document, display a message or perform another action. All the macros are written in a programming language called Macro, which is easy to learn. With Macro you can perform tasks that could take hours and days, even weeks and months, to perform manually. Macro also allows you to record the keystrokes you perform. Once you're done recording, you can play the macro back and see what was recorded. When it's time to create a macro, simply start recording and then write the code to make it happen. The first thing you need to do to create a macro is to tell your software to begin recording. Once the macro is started, you can stop it anytime by pressing the stop key. You can also choose whether you want your macro to be active or inactive. If it's active, it will run automatically when you start your software, but if it's inactive, you can still run it manually by pressing the record key, but nothing will be recorded. Finally, you can save the macro. The program will automatically save it to its internal database, so you don't have to worry about storing it elsewhere. KEYMACRO is a versatile program that can do a lot for you. It allows you to record what you do in the most efficient manner possible. The program is easy to use and the database where you can store the macros is large enough to contain everything you need.

**KEYMACRO Description:** KEYMACRO allows you to create shortcut macros to your software.
