Transmit and receive signal If you need to transmit or receive signals from a satellite in your vicinity, it is the best choice for you. With this application, you can view signals frequency on your GPS receiver and even perform a rough distance estimation for the satellite transmitter. GPS satellite configuration If you need to receive signals from GPS satellites in your vicinity, you can analyze the satellites' location, altitude and speed on TxPlan. It is the most suitable application if you need to find your current position. Satellite carrier display This application allows you to view the layout of the satellites available on your GPS receiver. TxPlan displays satellite carriers according to their frequency in a satellite search window. Display satellite frequency You can view the GPS signal frequency on the satellite display

---

window on TxPlan. This application allows you to determine the exact position of the satellite transmitter. Detailed satellite analysis You can use TxPlan to analyze the location, altitude and speed of your satellites. This application can estimate your current position and can also display the details of any satellites you have selected. Satellite frequency grid and labeling You can view all satellite carriers and labels on the satellite frequency grid on TxPlan. Frequency labeling You can view labels on your GPS receiver and labels on the satellite carriers on TxPlan. Frequency line TxPlan is a frequency line that displays the frequency ranges of carriers. It can be used to analyze satellites and help you plan a communication system. Advanced satellite analysis You can find the best spot on your GPS receiver to receive satellite signals on TxPlan. This application displays a map of the area around you and calculates the best

---

spot to receive satellite signals. Radio carrier configuration TxPlan can analyze radio frequency carriers and radio transmitters. This application allows you to view signals frequency, including the phase of signals and you can even determine the exact frequency of your radios. Radio carrier grid With TxPlan, you can view the transmitters of your radios on a satellite frequency grid. This application can assist you in planning a radio communication system. Radio signal measuring device TxPlan can display the exact signal frequency of your radios. Using this application, you can measure the signal levels of your radios and even compare the signal level with other devices. Radio frequency

Keymacro is a handy software application that can be used to automate repetitive tasks.

---

It lets you easily copy and paste various types of data from one file to another, from one screen to another, and from one application to another. The program is a powerful tool that also comes with a simple user interface that lets you adjust each setting and can be accessed by moving your mouse over each option displayed on the screen. Keymacro has several options. The first one lets you create new macros. You can load and save macros with the help of the program. Each macro is capable of running multiple commands. Keymacro can be easily installed on your computer. The installation package comes with the complete program, along with a Microsoft Windows installation file. You just need to follow the instructions displayed in the setup window and run the executable file. In addition, Keymacro comes with a standard Options window where you can adjust certain features, such as changing the menu bar and

---

whether macros should open or close automatically. Helps you automate repetitive tasks Keymacro lets you automate repetitive tasks, for instance, copy and paste data from one file to another. It can also be used to move the cursor and resize various windows. This program can be of great use to any user. Simply enter some of the required information and the macro is ready to run. For instance, if you want to move the cursor to the end of a particular text file and copy the entire content from the beginning of the file, all you need to do is to run the corresponding macro. Structure editor: Excel, word, excel, and other documents are prone to errors. They can be easily modified when using a structured editor. This software program is used to create and edit documents in various file formats, including office documents, office templates, and web pages. The software comes with an advanced

---

structure editor, which allows you to create various types of documents including tables, bullet lists, numbering lists, and so on. When it comes to formatting, you can easily create and edit various types of tables and divide the table content into rows and columns. After editing, the documents can be easily exported to various file formats. For instance, you can easily convert an Excel file into a Word document. Also, you can easily export an Excel file to Microsoft PowerPoint, a Word file to a web page, or a text file to an image. You can also create a text file or an HTML web page and save it as 1d6a3396d6

● TxPlan is a free-to-download software for planning radio and satellite communication systems. ● For easy use, the program was created with a minimalistic user interface. ● It lets you display the layout of transponders or carriers on a map. ● By default, the program uses the build-in map engine and displays carrier frequencies in a frequency chart. ● The user interface can be toggled between a map mode and a list mode. ● You can view the frequency charts as a bar graph or table. ● It lets you import data from text files or spreadsheets. ● By default, the program will organize the data and show each carrier as a separate line. ● With a free license you can save all your plans. **What's New in the TxPlan?**

This software is extremely easy to install on your computer. It doesn't need any computer configuration. An alternative for the APRS programme, which is incredibly popular worldwide. This software helps in planning radio and satellite communications systems. It is free to use for any number of users. Frees up your time by reducing the amount of information you need to organise. The amount of information you need to organise is reduced and simplified. This software is ideal for any beginner or professional in the field. Provides ease of use and is designed for all platforms. Intelligent design maximises the use of your computer. This software is a good start for the amateur radio enthusiast. A good

---

start for the amateur radio enthusiast because of its advanced features The software is suitable for the computer novice, as it's very easy to use and does not need much user input Features: Create your own layout diagrams by drawing lines and filling in the frequencies or other parameters Advance frequency planning by drawing frequency filters, such as bandpass or low-pass filters Use an existing radio frequency map or just import it to the program Plan carrier frequency allocations by drawing a cartography and adjust the carrier frequencies Advantages: Create your own layout diagrams by drawing lines and filling in the frequencies or other parameters Advance frequency planning by drawing frequency filters, such as bandpass or low-pass filters Use an existing radio frequency map or just import it to the program Plan carrier frequency allocations by drawing a cartography and adjust the carrier

---

frequencies This is a powerful program that provides you with a multitude of functions and tools for your planning projects. New TxPlan version, changes to the program menu Version 5.0.5, 3. June 2016 The new program is now compatible with more platforms It is now compatible with Windows 10 Changes the program menu, with more functionalities than the previous version It is now compatible with Windows 10 Why is new version of TxPlan needed? Version 5.0.5, 3. June 2016 It is a bit lighter in size than the previous version It is a bit lighter in size than the previous version This version can import lists of carriers or transponders The previous version was only capable of loading a specific carrier frequency It was impossible to add or remove a single carrier to a map, and to delete it It was impossible to add or remove a single carrier to a map, and to delete it This version can add or remove single carriers

---

from the map This version can easily add multiple carriers to a map It was impossible to delete multiple carriers from the map This version can delete multiple carriers from a map It was impossible to change the numbers of carriers in a map This version can change the numbers of carriers in a map The previous version was not compatible with the new Windows 10 operating system

---

## System Requirements For TxPlan:

Minimum: OS: Windows 10 (64-bit)

Processor: Dual-core 2.4 GHz (or faster)

Memory: 2 GB RAM Graphics: DirectX  
11-compliant video card with 1 GB RAM

Network: Broadband Internet connection

Storage: 23 GB available space

Additional  
Notes: 1.8 GB is included in your purchase  
and can be downloaded as Steam Runtime at  
any time. 1.8 GB is included in your purchase  
and can be downloaded as Steam Runtime
