BitNami Redmine Stack is an Open Source project that is completely independent from Redmine and supports the major Redmine versions. It comes as a virtual appliance and you can easily deploy it on either virtualized or physical servers. It may be installed to host a local version of Redmine or to deploy it in a cloud virtual infrastructure. More on BitNami: BitNami provides a scalable platform for your applications, enabling you to easily deploy and manage an application stack on your Linux, Windows or Mac OS X infrastructure. Our goal is to make it easier and faster to build, deploy, manage and scale applications on premises or in the cloud using open-source software and ready-to-use applications. BitNami Stack allows you to deploy many applications at once, including Ruby on Rails applications on Ruby 2.0 and the latest version of MySQL. BitNami Stack includes BitNami Mysql, a fully featured and secure open-source version of the popular MySQL database. It also includes BitNami Redmine Stack, a fully loaded Redmine bundle from BitNami including Redmine, Redmine Plugin, Redmine Wiki, Redmine PostgreSQL, Redmine PBX and Redmine CDN. These software bundles are protected by BitNami, a platform that ensures that all software is installed only to the best of our ability and that their components are constantly updated to ensure that they work perfectly. Although the focus is on Redmine, it also includes many more features that are essential to a modern development environment such as Git, Subversion, PHP with MariaDB, MongoDB, Memcached, ImageMagick, PHPUnit, Zend, Eucalyptus, Nginx, PEAR, LAMP Stack and more.
