RebCalendar Crack+

ReCalendar is a powerful and easy-to-use tool. It is the Calendar you always wanted Windows to have, instead of the small calendar linked to the clock, which sometimes you do not even have enough permissions to view. The calendar starts as tray icon. You can pop it up by pressing Win+C or by clicking on the icon. To hide it, press Win+C again or right-mouse click on the calendar and select Hide Calendar in the context menu. You can configure the holidays in the template files, called Calendar_.ini, located in the application folder, but it comes preconfigured with the holidays of Madrid and US as two different templates. You can add events double clicking on a date, although no alarms will be set. The size of the calendar can dynamically be set through the "+" and "-" keys and the transparency of the calendar can also be changed throught the context menu. Requirements: · VB 6 Runtime Install Size: 652KB Yacht SolsticeYacht Solstice is a modern and intelligent product line designed especially for those who are dreaming of sailing in the latest oceanic models, 5 or 6 m, can be used both for pleasure and for all types of fishing. Other Features · The cabin is equipped with 2 double cabins. · The yacht is fully equipped with all kinds of things necessary for day-to- 91bb86ccfa

RebCalendar

Being a calendar opens automatically by pressing Win+C or clicking in the Notification area. It can be hidden by pressing Win+C again or right-clicking on the calendar and selecting Hide Calendar in the context menu. You can change the calendar's color by clicking in a date or by pressing Ctrl+Shift. To reset the calendar size, press the "-(" key and you will see the calendar's size decreasing one unit. If you press "+(" you can increase the size one unit. Pressing the "=" sets the calendar's size to the default value, and "0" sets the calendar's size to zero. To show holidays instead of days, add the template Calendar_.ini to the application folder. For more information about calendar templates, see How to add a new calendar template in RebCalendar.vbs. 0 16 reviews LockMe.lockme is a small tool which can be used to easily lock your windows screen. It works with Vista +, in most cases it is mandatory to run the program as administrator. This is a freeware version, which means that you don't need to install it. Because it is a small tool, it is easy to unpack it in your documents folder. 0 2 reviews This project makes the user able to link applications from EXE, DLL, OCX, SYS, INF, CAB and VST files. These files can be found anywhere. 0 2 reviews Easy clicky MouseClicker is a small, easy to use tool for Windows. You can use it for playing simple games like MouseClicker. MouseClicker features easy controls, configurable levels, and a high score list to see how far you've gone in the game. MouseClicker runs on Windows 2000 through Windows 7. There's a file inside the download named "MouseClicker.ini". When you run the game, you will see that file. It will be used to save game information. If you want to save your own scores, you have to modify that file. Try saving the high score file and see if you get the high score that you really want. MouseClicker.ini configuration file: 0 1 reviews This is a freeware project, so it should work on all Windows versions. 0 0 reviews Makemeprogram places and prints text on your documents. It is a Windows Xp, Vista

What's New In?

RebCalendar will be a calendar that has the functionality of a "select-box" and a "calendar". With the + and - keys you can add or remove items from the calendar.
