Isolated active GTP-binding proteins bind to membranes more tightly than do the GTP-binding proteins which control them. This simple phenomenon is related to the extremely high chemical stability of the complexes. Using a continuous quantitative assay, more than 50 GTP-binding proteins have been tested for their stabilities in various media. It is shown that the GTP-binding proteins are more stable in aqueous than in lipid systems. This is particularly important for cell biology since it renders such GTP-binding proteins amenable to biochemical analysis in aqueous medium.Simplifying fertility outcome assessment in lesbian couples.
