The department organised several workshops and seminars on entrepreneurship for students. The first entrepreneurship cluster. (pdf) Entrepreneurship Management Rajeev Roy, The book proposes a "pragmatic" methodology for entrepreneurship that is rooted in anthropology. (pdf) Entrepreneurship Management Rajeev Roy, Entrepreneurship Management Rajeev Roy, Entrepreneurship Management Rajeev Roy, Entrepreneurship Management Rajeev Roy Push and pull Push & pull (also known as stimulus and response or positive and negative) is the most commonly used behavioral concept in psychology. It is based on the fact that, for example, happy individuals tend to have a positive state of mind, while sad people tend to experience a negative mood. When we feel happy, we release some positive energy and, when we feel sad, we release some negative energy. In short, stimulus creates a response, like a button that pushes and pulls. An example is someone stroking your head and patting your back. This response could be compared to feeling happy and releasing positive emotions. The most common form of this concept is the theory of positive and negative reinforcement. This theory assumes that learning occurs as a result of positive and negative reinforcement. This means that you learn better if a behavior is rewarded with positive reinforcement. The idea is that you do what you need to do to get that reward, so you repeat the behavior. Many learning theories are based on stimulus and response and the assumption that learning only occurs when behaviors are reinforced with positive and negative reinforcement. Usually, positive and negative reinforcement work well for learning. In this case, an animal was exposed to a kind human who offered positive reinforcement in the form of treats. For example, if the animal received two treats or a single one and a reward, it would become accustomed to receiving these rewards and repeat the behavior (positive reinforcement). By contrast, if the animal received a treat when it performed a particular behavior and received no treat otherwise, it would learn to stop the behavior. (negative reinforcement). Similarly, positive and negative punishment are described as short- and long-term consequences, respectively. Both forms of punishment decrease the occurrence of a behavior. For example, when an animal does something bad it may be punished. In the short-
