Sep 2, 2012 I am trying to install a fastboot driver on Windows 7 and get an error message that says: "The file specified was not found" It looks like everytime I try to install the driver it always says file not found. I have both 16 GB drive and 32 GB drive installed on my Windows 7 PC. 32 GB drive was installed when I had Windows XP on this computer and the 64 GB drive was installed by a friend when he tried to install Windows 7 after he got his used computer. I'm trying to install this so I can use my s1 boot to flash my flash disk.(I'm using the Flar built in utility). I have multiple flash disks, so I need to use the flash disk that I created in XP. I need this s1 boot to work in a FAST BOOT mode if at all possible, so I can use my flash disk as if it was a USB stick. I can't figure this out. Please help!! Apr 20, 2014 Windows 7, 64bit.
