The aim of this study was to compare the effects of the first-time pregnancy and the subsequent pregnancy rate after laparoscopic versus laparotomy tubal sterilization. A prospective, randomized, non-blinded, multicenter study was performed in women undergoing tubal sterilization for the first time. Women were randomized to either laparotomy (n = 97) or laparoscopy (n = 94) for the first operation. Women with a previous cesarean section or those with a tubal disease were excluded. Follow-up was performed by personal interview and questionnaires. Data were compared using the chi(2) test and student's t-test. A first-time pregnancy occurred in 28.9% of the laparotomy group and in 27.7% of the laparoscopy group. Eighteen women (12 in the laparotomy and six in the laparoscopy group) conceived after sterilization. A second-time pregnancy occurred in 40% of the lap ca3fbf1094

### What's New in the?

Markups will be created with screen space editing. This includes paint, line and curve style and gradient selections and fills. It also includes text objects, which can be automatically edited to match new features in version 2023. Finally, it includes a new type of annotation—a freehand drawing. (video: 1:15 min.) A user-friendly new import panel makes it easy to include hyperlinks and other data from documents. You can even import all data into a single drawing. Bidirectional editing allows you to move around in 2D space in two directions at once, like using your mouse and a keyboard or a drawing tablet. Selecting text, you can drag to modify the object, just as you would with a physical object. (video: 1:32 min.) In Paths and Layouts, you can create custom layouts that contain multiple related paths and layouts. You can even keep them separate files, so you can edit one and continue editing the other. You can then switch back and forth between the two layouts without losing your work. Creating a path also lets you save your drawing in different formats: SVG, AutoCAD DWG, or PDF. In Markup Assist, you can generate a new markup at a specific location in your drawing. Markup Assist will use the object's last editable state as the starting point for the markup. (video: 1:50 min.) Drawings saved to the cloud can now be accessed from anywhere. When you are on the Online or Web Cloud tab, you can create a drawing to your own cloud-stored set of folders. From there, you can move the drawings to any folder on your desktop computer. When you are ready to share the drawings with others, you can upload them from anywhere in the world. (video: 1:17 min.) Your CAD drawings are now connected to the cloud, so you can share them with others in your organization or with the world. This includes edits, so you can ensure that you are all working on the latest version of the same drawing. You can also import drawings from multiple people to create a single shared drawing. (video: 1:32 min.) Connected views: Clients and others can now see your drawings as you are working on them. They can see your latest changes and you can see theirs. You can work on the same drawing from different locations, each on their own computer
