Introduction AutoCAD is an Autodesk product available for both home and business use. If you're looking to set up a small business and sell through AutoCAD, you can use it for designing, drafting, modeling, animation and more. Autodesk offers AutoCAD as part of the AutoCAD Basic Family for free. A typical user might use the software every week, or even daily, depending on the work they're doing. It might be perfect for home or business use, though it's worth noting that while the AutoCAD Basic Family is free, it can only be used for personal use. The business plans come with additional features that allow for designing and animation. The business AutoCAD plans cost as much as \$10,000 per year. The first AutoCAD was bundled with a PC running DOS and came in either a cabinet or a desktop box. The first AutoCAD had limited features and used an IBM PC compatible (IBM PC compatible) video card. As the product evolved, so did the hardware requirements. Originally, the first version required a 32-bit IBM PC compatible to be able to run the product. The second version of AutoCAD was released with the IBM PC AT and the 486 processor.

The third version of AutoCAD came bundled with Windows 3.0. As we know, computer hardware and software evolved to a point where the AutoCAD Basic Family is available as a web and mobile app, in addition to the desktop version. The mobile apps are compatible with the iPhone, iPad and Android, and are available in the App Store and Google Play. The workflow with Design Review is very similar to Autocad's drawing review feature, which means that most of the actions in Design Review are available in your CAD software as well. You can use any layer you want to turn into an image. Layer properties such as linetype, hatch, and dash pattern are transferred to the image. Changes made to the image are automatically applied to the layer. You can also save the image to the data port of the computer. Then, you can use the image in any CAD software. When you export the image, it appears as a vector object in your CAD software. In Design Review, you can create a custom file format for your vector object. You can also save the file as a document. However, you cannot save an image to a layer. You can make changes to an image, but those changes are not applied automatically. To apply changes to an image, you have to go back to Design Review and select the image and then go back to the file and select the image again. You can also save the image as a DXF or DWG file. The file format is the same as DWG or DXF files saved in the file menu of Design Review. You can also save the image to your hard drive, but it appears as a DXF or DWG file. This

Markup Assist is now available as a Windows application for your PC. (video: 1:27 min.) Digital Paper (DP) is a new graphics tool that allows you to see and create annotations on Paper, then export the annotation as a Microsoft Word document or make use of it within AutoCAD. (video: 2:04 min.) Tint, Contrast, Hue, Saturation, and Color: Make your drawings more realistic with RGB color and tint. Now you can control contrast, hue, saturation, and more. (video: 2:22 min.) When working with digital color you have two choices: Hue, Saturation, and Lightness, or Red, Green, and Blue. Now you can use all six values to create more precise palettes for your documents. (video: 1:57 min.) Hue: When using digital color, the RED, GREEN, and BLUE values of a color spectrum tell us about its brightness. But color isn't all about brightness: Green is less bright than red, but more bright than blue. Hue offers six options to help you choose colors that coordinate or contrast with each other. Saturation: Saturation describes how closely or how far away a color is from a light gray color. This is how many gray shades you can discern. Think about this: If you're looking at a wall with white paint, the wall will look as white no matter how much gray the paint color has. But, if you view the same wall with black paint, then you will perceive gray shades of the paint color. With new palette settings and the ability to control saturation, you can see how much gray you can detect in a color, making it easier to choose colors that complement each other. Lightness: A color's lightness or darkness also refers to the lightness of its gray shades. So, you can think of lightness as the brightness of the color: The darker the color, the more gray it has. Tint: A color's tint describes the color's color tone: When colors are next to each other on the color wheel, their color tones will be similar. The new Hue, Saturation, and

Lightness palette contains eight color sets and provides individual color settings for each set. Scale Feature: Scale gives you the ability to zoom in on your drawings to
