AutoCAD Crack With Full Keygen [Win/Mac] (April-2022)

The AutoCAD environment is not limited to the desktop, however, and the user interface (UI) can adapt to different circumstances. For instance, work can be done in the browser on a mobile phone. A browser-based interface allows users to work in AutoCAD on a range of desktop and mobile devices, from small smartphones and tablets, to laptops, desktops, and large multi-screen workstations. The UI is made up of one or more windows or views. Each window displays a workspace on the screen, showing the drawing currently being worked on, or a series of workspaces that can be arranged for each job. The user can move from window to window or from window to drawing area in a drawing. The drawing space is made up of the intersection of the window and the drawing area. A view (or window) has several characteristics. It displays a drawing and is selectable and navigable. It can be closed and reopened. Some views can be placed on the work surface; others cannot. In AutoCAD, there are three types of views: the Graphics View, Draft View, and Part View. The Graphics View is the view that displays a drawing and allows editing, whereas the Draft View is the view that displays a drawing or object but does not allow editing. The Draft View and the Graphics View can be combined into a Draft View that displays a drawing and allows editing. The Part View is the view that displays a drawing or object and can only be navigated. The following terms are used to describe views: Graphics View The Graphics View is used to edit a drawing or objects contained in a drawing. This view displays a window on the screen that shows the currently active drawing or one or more views of that drawing. The most commonly used view is the Graphics View. It is the view displayed by the default view menu or by selecting View ➤ Graphics View. Draft View The Draft View is used to display a drawing or an object contained in a drawing. This view displays a window on the screen that shows a drawing or object. This view is usually used to display a draft of a drawing or to browse a drawing. The most commonly used view is the Draft View. It is the view displayed by the default view menu or by selecting View ➤ Draft View. Draft View with Graphics View The Draft View with Graphics View is a combination of the Draft View and the Graphics
