Autodesk AutoCAD is a Commercial CAD program that is designed primarily for the construction, industrial, and product design industries. The user interface has been designed to accommodate novice users, with a simple user-friendly interface with easy navigation. To use AutoCAD, users must install the program on their computer and pay a licensing fee to Autodesk for continued use of the program. Several versions of AutoCAD are available for desktop computers, with the newest version being AutoCAD 2020. Mobile versions of AutoCAD have been available since 2012. AutoCAD is sold as a stand-alone software package, but the company also offers an optional subscription-based AutoCAD Online subscription service. AutoCAD for Dummies was developed as a beginner-oriented step-by-step guide to using Autodesk's CAD programs and features. A number of independent applications have been developed for AutoCAD, allowing the program to run on mobile devices, such as smartphones and tablet computers.

History In early 1982, Bruce Rosenfeld, a designer at General Electric, invented the concept of a computer-aided design (CAD) program that would allow him to draw in the office, on the plane or on his way to work. On December 10, 1982, Rosenfeld submitted the program to General Electric, which was subsequently hired to create the first commercially-released CAD program. The resulting program, dubbed Autodesk Inventor, was released in 1983 and was originally priced at \$14,995. The first full version of AutoCAD, known as AutoCAD 1.0, was released in 1986 and was priced at \$7,995. In 1990, Autodesk acquired the rights to the AutoCAD program,

renaming it AutoCAD. The following year, the company began offering AutoCAD as a subscription service, charging \$399 per year and offering lifetime online access to AutoCAD drawings. In 1994, Autodesk split the

Geometric models AutoCAD supports import of both AutoLISP and Visual LISP files. A common type of file in architectural design is the Cadastral Survey (CSV). The CSV is commonly used in American architectural practice, and Autodesk has a CSV import feature. It is used for the import of a CSV file containing the building and land information which can be used for generating 3D building models. The 2010 update included the ability to import DWG files. Building information modeling AutoCAD Architecture is a BIM (Building Information Modeling) application from Autodesk. It is built on top of the core CAD product AutoCAD, and offers a number of facilities for the creation of building models in 3D. In 2004 Autodesk released the Architecture Project Builder (APB), a BIM application for AutoCAD. The Architecture Project Builder 2 (APB2) was released in 2009 and enabled users to quickly create 3D architectural models and data. The Application Builder in 2009 also made available the option to directly generate an Autodesk Architectural SDK format of a 3D model. Multi-platform support In 2010 Autodesk released AutoCAD for the iPad, the first Autodesk application designed for the Apple iPad. AutoCAD and AutoCAD LT were released for the Android platform in 2012. In 2013 Autodesk released AutoCAD 2014. Autodesk Inventor, Autodesk Revit, Autodesk Navisworks, Autodesk 3ds Max, Autodesk Maya, Autodesk 3ds Max Game, Autodesk Motion Builder, Autodesk 360 and Autodesk Flame are all cross-platform applications which allow the user to view and edit 2D and 3D CAD drawings and models on any computer or mobile device.

Add-on products The most prominent AutoCAD add-on products are AutoLISP, Visual LISP and VBA. AutoLISP is a programming language available for AutoCAD that is used to program custom commands. AutoLISP supports a number of languages including C, C++, C#, Delphi and Visual Basic. AutoLISP supports 2D and 3D graphics. Visual LISP is a Visual Basic for Applications add-on. Visual Basic for Applications (VBA) is an add-on for Microsoft ca3bfb1094

The IPK (International Patent Cooperation Treaty) convention provides a method of representing patents, especially trademarks, by means of special symbols. Thereby, it is possible to show representations of a patent on an electronic communication system (including a mobile telephone or computer, for example) so that a user can check if the communication system is infringing the patent. In a case of an electronic communication system, the term "communication system" means, in particular, a radio telephone, a mobile telephone, a paging receiver, a computer, a personal digital assistant (PDA), a computer with a display screen, a computer with a keyboard, a pocket PC, a portable PC, a data processing device and the like, and comprises applications which have to be used for the implementation and use of such communication systems. Examples of applications to be used in mobile telephones are the display of telephone numbers, the Internet access, the sending and the receiving of text and voice data, the display of media contents, the electronic mail or the display of documents and other data, etc. In this case, the trademark or patent is represented on the electronic communication system by means of a representation which can be displayed on the communication system and which is stored in a database of the communication system. The database and the representation are, in

are now added to the Level of Detail menu, and the item commands are added to the Align Selection and Direction Selection group. A print preview view in the Drawing Area is now available in the Print dialog. “Outline settings” are now saved when the Outline Mode tool is used to change the Outline property of a closed shape. The No Line function in Edit Shape and Edit Polyline has been enhanced to automatically connect shapes with overlapping parts, and also gives you the ability to perform these operations manually. The Align Points and Snap to Grid commands now can be used to align a selected group of points or to align an item to a specified grid location. The AutoCenters tool can now be used to automatically center an object on its horizontal, vertical, or diagonal axes. In the print dialog, the checkboxes for all three page views and the black, white, and color ink settings can now be combined. A number of enhancements to the AppleScript and Python scripting languages have also been made. “View” and “View Only” commands: The View command displays your drawing in one of several ways, including Orthogonal, Perspective, and Photo. The View Only command displays your drawing in its current view state, with all layers closed or maximized, and all other drawing settings closed. New alignment commands: These commands change the coordinate system of a selected drawing, moving it to a new location on the plane or in 3D space. The Align Selection and Align Direction Selection commands can be used to align a selected item to an arbitrary point or to a specified orientation. Align to Grid: Align to Grid (Shift+G) commands are available for free-hand selection, picking, and for the alignment of free-hand sketches, lines, and polylines. The snapping options of the Align Tool have been enhanced. You can now snap to the Grid, Snap to Grid, and
