3D modeling In 1996, Autodesk released 3D Studio MAX for the Macintosh, which allowed for the creation of 3D computer models of buildings, aircraft and other 3D artwork. 3D Studio MAX was later expanded to 3D Studio Max for Windows. It was the first application of its kind to have a true 3D modeling environment, allowing users to create 3D objects, manipulate them, and use them in 3D scenes. AutoCAD LT's 3D features are quite limited and are mostly geared towards 2D models. The extensions for 3D modeling were later integrated into AutoCAD LT. In 2001, Autodesk introduced AutoCAD 3D, a set of features intended to allow non-computer-artist users to produce 3D models. By 2002, the combination of 3D Studio MAX and AutoCAD LT was the most popular CAD package in the world. Document management Autodesk has expanded its original Document management strategy through innovation and through a series of acquisitions. In 1996, AutoCAD introduced the ability to link and synchronize drawings with Microsoft's Windows 95 file management system, called Windows Explorer. With this release, AutoCAD became one of the first graphics applications to take advantage of the Windows Explorer file manager. This feature allows a user to store all their documents in a central file manager and allows them to manage all documents using a unified interface. Since AutoCAD 1999, Autodesk has also developed the Document Center, which allows users to take advantage of the Windows Explorer file manager and a centralized server to manage and store documents online. For desktop users, there is a stand-alone version of the File Manager, called FileServer, and a command-line version called FileServerCLI. In 2000, Autodesk introduced AutoCAD Sync, a component of the AutoCAD Design Suite (autodesk.com) which allows users to synchronize drawings between two computers and provide the ability to print and preview drawings in both places. This allowed users to work on a project on one computer and take advantage of the latest changes on another, while printing their drawings without the need for a network connection. AutoCAD Sync was the first application of its kind, as most graphics packages at the time required that a network connection be available. Later in 2003, the technology was expanded to support the ability to upload and download documents to and from the Internet using a web browser. AutoCAD ca3bfb1094
