Q: Making a one-way hash from an arbitrary data sequence I'm trying to avoid the use of an external library. Are there any standard mathematical functions that can generate a one-way hash from an arbitrary data sequence? The goal is to compare data as it streams in, to be able to decide if it needs to be saved or discarded. For example, based on what I read on Wikipedia, a SHA-1 hash can be generated in two ways: by starting with a hash of a single character (e.g. 0 or 1), concatenating the resulting hash together for each subsequent character, and by converting arbitrary sequences of binary data to hexadecimal data (with the "a-f A-F 0-9" pattern used for SHA-1), and hash from that. I'm not looking for the exact implementation of this particular algorithm, though I suppose it would depend on the algorithm used. I'm looking for a standard mathematical function that can take a sequence of random data and convert it into a one-way hash.

A: Wikipedia does a good job summarizing what is needed for a one way cryptographic hash function: The input is an n -bit message, M , interpreted as a bit string. The output is also a bit string, S . Each bit of S is the result of applying a unary operation, F , to the bit $M[i]$ of M . The bit $F(M[i])$ of S depends only on $M[i]$. If a collision should occur (such that two different bit strings S and S' with the same values of $F(M[i])$ for all i satisfy $F(S) = F(S')$), it can only be detected by additional a secret information x that depends only on the values of $F(M[i])$ of both S and S' with $i > i_{\sim 0}$; here $i_{\sim 0}$ is the index of the last bit that is different in the two strings and thus the index of the first non-zero bit (from left). Therefore, for a hash function with the same $M[i]$ as a one way function, we must find a function $F(M[i])$ such that, for a given i , the range of possible values of $F(M[i])$ is n bits, and there is an efficient algorithm to calculate $F(M[i])$. The requirement that the hash has the

Final Words:

That was the the end of our review of the Eden Ring: Tarnished Soul, so I think we can conclude that it has everything you would expect from an RPG. Now you know everything the story has to offer and you can choose from five different classes, so your characters can be what you like. Each class has its own skills, and you pick a path to acquire them. Characters can be build up from three weapons. It is easy to use and detailed, so it was pretty interesting to play for me. If you try it, I think you would agree that it is definitely one of the best games that is out there, so I'll let you review it instead of me.

See you all!
