Q: How to determine the number of Views between the start and end date of a year I have the code below that works for determining the number of days between two dates in a year. I am trying to find a way to determine the count of views for a given month between January 1 and December 31. The problem I am having is finding a way to determine the amount of views without using the date hour, month or day. Specifically I would like the count to be based on the number of days in a month. I have searched but I have not been able to find a complete answer. Thanks. Edit: Here is my current date logic:

```
DateTime fromDate; DateTime toDate; int days = (int)(Calendar.GetDaysInMonth(fromDate.Year, fromDate.Month)); int hours = (int)(Calendar.GetDaysInMonth(fromDate.Year, fromDate.Month) - 1); int min = (int)(Calendar.GetDaysInMonth(fromDate.Year, fromDate.Month) - 1); int month = 1; try { fromDate = DateTime.ParseExact(txtStartDate.Text.Trim(), "yyyy-MM-dd", null); if (txtStartDate.Text.Trim().Length == 0) { MessageBox.Show("Please provide a starting date."); return; } toDate = DateTime.ParseExact(txtEndDate.Text.Trim(), "yyyy-MM-dd", null); if (txtEndDate.Text.Trim().Length == 0) { MessageBox.
```
