Manual for Information Technology
Auditing 3rd Edition.Q: Why are
there so many TCPv6 sockets? I have
a server with two interfaces on it,
one static and the other one IPv6.
The IPv6 one has three sockets set
up for TCPv6. For some reason, I
need to keep one of them. I have to
mention that I'm not the only one
who needs to use this server, I can't
just ignore it. Why are there two
sockets for the exact same thing?
The environment: Windows 2003 R2,
Windows 7, both 32 bit. This is the
info on my server: Status: Enabled IP-
Address: [2001:0DB8:0899:0E8AA:0
B0:0CC2:0000/64] Global IPv6
Address: [fd03:9300::2] Global IPv6

Address (Router): [2001:0DB8:0CE4:0F93:CAFF:E029:D47D/128] A: The IPv6 address depends on your global scope. For example, an IPv4 address of 2001:0DB8:0899:0E8AA:0B0:0CC2:0000/64 indicates that the host can talk to the following hosts: 2001:0DB e79caf774b

Hall (Author) All rights reserved. Post navigation Saying “yes” to today A few months back I taught some of my students how to meditate. I was fairly unprepared for the information I’d be giving, as I had never actually done it myself, and it was very difficult to describe what the process involved (and I’m extremely articulate!). I assured them that I’d be sending them the meditation booklet that my teacher had suggested. I’d say it was all good, but I had to laugh when I thought about it. The booklet had been sent to me with the instructions “read it, be inspired, then feel free to use it in your own practice”.

Now, I've used it in my practice and it has been an incredible gift, but the problem is that I find myself applying all that is in that book to me in
