Lucid Help Desk [April-2022]

Lucid Help Desk Crack For Windows is an end user help desk system for tracking support cases, service requests, and maintenance to manage them in an organized, responsive and efficient manner. It can be a great software solution for your small business or team. It has a highly intuitive graphical interface, is easy to

use and doesn't require highly technical knowledge to setup or use. It provides better ways to focus on your daily work. If you need to solve customer problems quickly, you can create a problem and set your priority. New releases are notified via email when they are assigned to you. When you get a bug request from an end user, you can create a ticket describing the problem and attach information about your environment and client. This information is automatically added to the ticket and stored in the database, so you can refer back to it later. You can also set custom fields for the tickets to save additional info, making it easy to refer to it later. When a new service request comes in, you can determine the appropriate level of service by assigning it a priority. Lower priority requests can be handled

immediately and wait for you to do other things in your working day. High priority requests can wait until you have time to work on them. You can get a quick overview of open tickets, resolve them quickly, and assign the work in progress. You can assign tickets to different users and get an instant overview of who's working on them and when they expect to be done. It has an integrated employee database that can be accessed from any station in the system. It comes with tools that make it easy to store employee personal information, such as contact information, user rights, and bio info. It comes with a powerful reporting engine that can generate many useful reports, including a weekly status report, an Employee Portrait, a Project Overview report, and a Customer Satisfaction Analysis. It can display the

information in a tabular format or use graphical charts to display the data more clearly. You can define employee specialties, such as sales, finance, admin and email. You can grant different levels of access to the system by assigning rights to each employee. Different employees can have different rights to view, add, edit and access the information stored in the system. Reports: You can import bugs from different support systems such as email and phone. When a user reports a bug, the system immediately reports it to a list of people and their contact information. You can create your own list of people to notify when a new bug is assigned to them. b7e8fdf5c8
