The program allows the user to browse through ODBC connections and manage them via context menu. The user is able to close connections, or change their properties by highlighting them and clicking on the context menu item "Properties". The application provides a new configuration wizard which allows the user to assign values to a connection parameter. This is done by activating the context menu item "Set connection parameters".Q: Linking and FileExists Code When trying to link to another file in runtime, I get runtime exceptions that the file doesn't exist. I understand why this happens when trying to access a file that doesn't exist. But when the file exists, why are I still receiving runtime exceptions? This is the linker code: private void link() { try { String [] s = { "c:\\workspace\\Linking\\xmlresource\\activity.xml", "c:\\workspace\\Linking\\xmlresource\\advice.xml", "c:\\workspace\\Linking\\xmlresource\\activity.xml", "c:\\workspace\\Linking\\xmlresource\\advice.xml"}; for (String s1 : s) { File f = new File(s1); if(f.exists()) { s1=f.getAbsolutePath(); } System.out.println(s1); try { URL url = new URL("file:///"+s1); //System.err.println("Trying to link to " +s
