PSD format. A Photoshop file's root layer is called the _PSD file_. The Photoshop file is saved with the PSD extension. **Aligning layers**. You can align layers to create a _composite layer_. If you make adjustments to that layer, you can then align it to another layer and create a new composite layer. **Layer Masking**. A Layer Mask is another way to protect an image from unwanted modifications. Create a Layer Mask by clicking the Layer Mask icon in the Layers panel. **Blending**. You can blend multiple layers together to make a soft transition between one image and another. **Filters**. There are many filters available that you can apply to layers, images, and paths and blend them together in Photoshop. **Custom brushes**. See the box on page for more on how to use custom brushes.

Proving too complicated for the everyday user but too complicated for the professional, Elements sits somewhere in the middle. It has most of the features of the pro version, but its interface is stripped down and it's far more intuitive than the pro version. It's always a good idea to do your research before buying any software. The following list of tips, tricks and plugins for Photoshop Elements will help you avoid common problems, and will help you be a more effective photographer, designer, graphic artist or whatever it is that you do. But first, make sure you are using the latest version of Photoshop Elements before you begin. Your editor may be updated to be newer than the one included on your CD if you download from Adobe. Image Processing Adobe Photoshop Elements is more than a simple image editor. It features many advanced imaging tools that allow you to make corrections in the image or create new or different pictures. Depending on your image editing needs, you will probably use one or more of the following functions: Color Mixer, Curves, Adjustment Brush, Levels, Image Size, Stamp, Touch-up Tools, and Retouch. Color Mixer The Color Mixer lets you change the color balance of images by reducing or increasing the amount of colors in an image. In the Color Mixer window, you have a choice of four different color schemes. The default (Luma) scheme is for a normal image. The default (Lab) color scheme enhances color detail. The Red/Green (RGB) scheme adjusts color based on color saturation (brightness) and color intensity (amount of red, green and blue). The Blue/Yellow (LAB) scheme increases the amount of yellow in an image. It should produce more saturated images and can be useful in low-light photos. The Blue/Red (RGB) scheme is meant to take an image and bring out the red tones and de-emphasize the blue tones. This will produce softer colors. When you use a color scheme, you can choose a color cast from among six options: Warm, Cool, Toned, Sepia, Brighter and Film. Curves The Curves tool allows you to adjust the overall contrast and brightness of an image. Levels You can use the Levels window to adjust a picture's exposure, contrast, and brightness. You can use the ~05a79cecff
