and more : Free Games, Free Software, Free Crack, Free Android APKs. Andriod-Apps-Free-Crack.3gs.Max.2. [Pixelan SpiceMaster Pro download] 3.02 Free Version is available now on this site. It is. You can download themes and edit them from within RapidWeaver and the result is a .Q: Search for multiple values in two columns in python I have a search function that looks for values in two columns of a data frame and returns a new data frame with only the columns with the value. The column name can be either 'School Name' or 'School ID'. The School Name column has the school and the School ID has the school's id. A sample data frame is shown below: df: School ID School Name 0 3720 Kiambu 1 3721 Nakuru 2 3722 Nyeri 3 3723 Kisumu I want to search both columns by the IDs of the schools and get the column containing those IDs. I used: df2 = df.where(df['School Name'].isin(self.search\_data['school\_ids'])) but this only searches by the school\_ids in the School Name column. I want it to search by the School ID and the School Name and return only the rows with the School ID, i.e. the row with School ID of 3720. A: You can use DataFrame.where with Series.isin schools = df['School ID'].tolist() s = pd.Series(df.School\_ID.map(df.index)) df = df[df.index.isin(schools)].copy() print(df) School Name School ID 0 Kiam
