The "Lands Between" (Lands between) is the setting of the game. It is a place where the law of nature is defied. By its use of visuals, action, and a world with a 3D effect, the game achieves an extraordinary sensation of realism. In the game, you will lead an adventuring party to fight against this world's opponents, and become an Elden Lord by defeating a series of fearsome monsters and searching for the artifact that holds the power to save the world. This is the fantasy world which began to appear in a variety of sources simultaneously, including novels, movies, and TV. The fantasy has left the reality of the specific setting and has been transformed into a floating kingdom, embodying the best and the worst of fantasy. "The World Between" series is an RPG which fans of fantasy will surely love! Re: canon fd50 That's interesting that the B&W model was discontinued earlier than the ef50. In fact, I think the B&W model was the only one made by "Delta" which is how the early '90s versions of the fd50 were marketed. Perhaps the '03-'06 FD50 is discontinued, but I'm not aware of this. The german marketing for the ef50 (1998-2003) claimed a VF 50mm 1.8 EX (cf. 18-55mm).

1. Field of the Invention The present invention relates generally to the field of electrochemical cells. More particularly, the present invention relates to an apparatus and method for measuring the thermal profile of a PEM fuel cell stack.

2. Related Art Fuel cells can be used for various applications, including stationary power sources such as for buildings and automobiles, and portable power sources such as for computers and consumer electronics. A conventional fuel cell is operated by supplying an oxidant, such as oxygen from the air, and a fuel, such as hydrogen to the anode side of the fuel cell while allowing the fuel cell to electrochemically react at the cathode side to produce electrical power. This is commonly referred to as an air-breathing fuel cell because it requires oxygen from the air as a reactant. In operation, the fuel is supplied to the anode and the oxygen is supplied to the cathode through separate channels. The reactants, typically stored in pressure
