WhatInStartup WindowsStartup Manager is a simple tool you can use to manage the settings of programs that launch at startup. Through it, you can add, edit, manage, remove or disable items that launch every time you boot your computer. You can also exclude apps from a list of programs that launch at startup and also move them to another folder or location. The programs and shortcuts are listed in two tabs. The first tab features the programs that launch at startup, while the second tab contains shortcuts of the items that launch at startup. By default, the application keeps a copy of the shortcuts or items that were added at a default location, making it easier to add or remove items from the list. In addition to this, you can specify where these copies are placed. You can also specify whether the shortcut is deleted from the Windows startup location or not. Options include adding, removing or disabling shortcuts or entries, creating a new list of startup applications, managing and organizing your lists, and removing or disabling the related Group Policy items. In addition, you can get information such as the location where shortcuts are saved, the type of item, the name of the file, the date and time when it was created or updated, the size of the item, and many other details.
