Keyboard Shortcuts Edit Description Edit AutoCAD is a fully integrated desktop CAD application with both drafting and design functions. The user can navigate the design space in 2D and 3D modes, and view it on screen or on a paper-based paper space. The editor allows you to draw and modify lines, circles, ellipses, arcs, splines, polylines, arcs, splines, polylines and polygons. You can change the dimension of the objects that you create, or you can combine them with other dimensions. You can annotate them with text or select your own custom symbols or marks. You can then save and export them. You can also modify existing drawings by adding, deleting, or modifying components, changing properties, or converting them to other types. You can create views from your drawing using grid, labeling, or zooming. The program supports multi-threading, and enables you to coordinate the movements of several users (users or CAD operators) who all work on the same drawings. Source: Autodesk Support Site Q. What is AutoCAD? A. AutoCAD is a professional 2D drafting and 3D modeling application, that was designed for the construction industry. Graphic size - Supporting various options to use different sizes of the drawing board on a computer screen. This is the most common setting in AutoCAD for any change in the screen settings. Many CAD users have set their screen resolution to a lower value than the monitor's native resolution. This creates the perception of too large objects on screen, because AutoCAD attempts to display larger objects at a larger screen size. AutoCAD, though, makes an effort to resize objects to the native resolution of the monitor being used. This results in a much more detailed rendering. The "Units" feature is a user interface feature to change the user interface layout of the drawing view to accommodate the display of drawings on a specified scale. By default, each point on the drawing board has a fixed scale and the view is automatically resized for a specific fixed scale. In the default display, it is not possible to distinguish between points at different scales. Units provides a way to specify a scaled points that are displayed on the drawing board. The units can be specified as follows: 0 (zero): standard units, i.e. based on the physical measurement and will scale all parts of the drawing board to the same scale. 1 (one): standard units, but scaled by a factor. 2 (two): scaled by twice the default factor. Units can be set by: Right-clicking a specific point (the default setting is the entire drawing is scaled to the same scale) Clicking the units button at the bottom of the units dropdown (right next to the zoom button) Changing the units is one of the most common features used by most CAD users. Tools A tool is an entity in AutoCAD that is selected by default in any window. There are several types of tools in AutoCAD: Non-selectable tools: such as the "Scalable Edit Tool" and the "Select History Tools". These tools cannot be selected, and the selection that they contain will always be visible. Selectable tools: such as the "Dimension" tool and the "Draw Orientation" tool. These tools can be selected by a user and they will turn grey. Auto-selectable tools: such as the "Select Polylines by Control Point" tool. These tools can be selected without the user having to click the mouse button. They will turn grey when selected. History The program was originally developed in ca3bfb1094

A new bioerodible implant composed of the two polymers poly(L-lactide-co-glycolide) (PLGA) and poly(L-lactide) (PLA) was studied. The biodegradable implant was prepared by injection molding of microcapsules containing tobramycin-PLGA. These microcapsules were deposited into an aqueous medium to form a bioerodible implant. The relationship between the implant size and the antibiotic release was investigated by the in vitro release of the antibiotic from the implant. The parameters controlling the in vitro release of tobramycin from the implant were studied. A regression curve was found to be a function of the product of the microcapsule size and the release rate, with R^2 equal to 0.935, showing that it is possible to control the antibiotic release rate by modifying the dimensions of the microcapsules.tag:blogger.com,
