File formats Because of the success of Autodesk's AutoCAD products, their formats have also become widespread: DWG: DWG is the standard file format in the CAD industry. It is also the primary file format in AutoCAD and AutoCAD LT. The official specification, in ISO/IEC 10918, is widely supported by vendors, including both the open source CAD packages FreeCAD, Sketchup, and Fusion 360. PLT: PLT is used in AutoCAD for easy editing of line text. The standard format, in ISO 12000-2, is supported by AutoCAD, as well as other CAD products such as MicroStation. DWF: AutoCAD DWF is the standard format for 2D CAD (noted for use in AutoCAD for its compatibility with 3D CAD tools, such as Autodesk's 3ds Max or Autodesk's Maya). It is the standard file format for all Microsoft Windows-based products. DWF is a format created by Autodesk for AutoCAD, Inventor, and 3ds Max. Inventor and 3ds Max use the DWG export format to create DWF. AutoCAD and 3ds Max use Autodesk Inventor DWG to create DWF. Autodesk's 2010 release of AutoCAD was the first version to use DWF as the default file format. DWF is a binary format that stores both the geometric and text information of an entire drawing. The DWF file can have many different layers (objects), each with its own fill color and other drawing properties. The information used in an AutoCAD DWF drawing can be stored in a DWF database. CADFX: Autodesk's CADFX is an open source free C++ class library. The software provides general purpose support for C++ in the Autodesk platform and allows the development of plug-ins and other add-ons for use with the AutoCAD family of products. Autodesk has released the CADFX source code under the Open Source Initiative (OSI)-approved BSD license. XML: Autodesk has released its software under the Creative Commons license (CC-BY-NC-SA). Any third-party product that is based on the XML source code can be considered a derivative work and is licensed under the same terms as the CAD source code.
