The first computer-aided design (CAD) program was created in 1958, for use in automating the design and drafting of machine tools. In the 1960s, a consortium of industry trade organizations formed a committee, called the Drafting Subcommittee, that eventually produced the first official CAD standard called D-274. In 1971, the Digital Equipment Corporation (DEC) released the first of a series of computer-aided design (CAD) systems, DECMaker. DECMaker was the first of what would later be called DIB systems. In the 1970s, MIT's Lincoln Laboratory released the PLATO system, which included digital data processing and CAD. MIT's PLATO system was widely used by government agencies to create computer-aided design drawings. During the 1970s and 1980s, the first commercial computer-aided design (CAD) systems were created. In 1974, the Massachusetts Institute of Technology (MIT) developed the first of a series of computer-aided design (CAD) systems, the PLATO system, which included digital data processing. MIT's PLATO system was widely used by government agencies to create computer-aided design drawings. The National Center for Women in Technology (NCWIT) reported that in 1977, women accounted for more than three-quarters of all computer professionals in the United States. In 1977, AutoCAD was first introduced, initially marketed for use on desktop computers with internal graphics controllers. AutoCAD was designed to work alongside other design software, such as architectural drafting software, rather than as a stand-alone product. In 1979, AutoCAD 2.0 was introduced. In 1983, AutoCAD 3.0, AutoCAD 4.0, AutoCAD 5.0, AutoCAD 6.0, AutoCAD 2008, and AutoCAD LT were released. With the 2007 release of AutoCAD LT, the AutoCAD line of programs was renamed the AutoCAD Architecture & Design product line. In 1982, the first public release of AutoCAD was 1.0, which was distributed on a large floppy disc. In 1984, the first full-color, desktop-size AutoCAD was released. Later that year, the company's first product was the MiniCAD for smaller computers, running on minicomputers with internal graphics controllers. In 1989, AutoCAD

The API consists of the AutoLISP and Visual LISP API extensions. Visual LISP (VLISP) is the base for the VBA API, whereas AutoLISP is the base for the (formerly).NET and ObjectARX APIs. AutoLISP is an extension of the existing AutoCAD For Windows 10 Crack programming language, written by Acatec Software. It is a programming language, which is interpreted and it does not require compiling. AutoLISP and Visual LISP In contrast to Java and AutoLISP, Visual LISP is a native language. To program Visual LISP, AutoLISP contains special code that converts Visual LISP into AutoLISP source code. History In 1996, Microsoft purchased Acatec, and worked with Acatec to develop the AutoLISP Language Compiler (ALLC). AutoLISP was first released in AutoCAD 2.0 in April 1996. Visual LISP is the work of Stephen Graham, co-author of Acatec's Visual LISP (VLISP)

programming language. VLISP was introduced in 1996 with the release of AutoCAD for Windows 95. AutoLISP AutoLISP is a user-programming language. It is not a programming language per se, but rather a high-level extension to the existing Autocad programming language. It is interpreted, meaning that it does not require a compiler. It does not require a compiler because it is an extension to AutoCAD. Visual LISP Visual LISP (VLISP) is a user-programming language. It was introduced with AutoCAD for Windows 95 in 1996. It is not a programming language, but is a High Level Object Oriented Language (HLOOL). Visual LISP (VLISP) was designed and developed at Microsoft as the proprietary extension language for AutoCAD for Windows 95. Visual LISP was created by Stephen Graham and is maintained by Microsoft. In addition to Visual LISP, VLISP, and AutoCAD, Microsoft has licensed and developed for VLISP software products such as the VLISP Builder, VLISP for Visual Studio, Visual LISP Builder, and the Visual LISP compiler.
