our politics." October 9, 2016
...and he said "to Hell with
him!" In the otherwise quiet
Manchester Book Festival
earlier this month, I was
fortunate to be seated at a
table with a massive woman
surrounded by eight or so
hovering friends. It was one of
those serendipitous
experiences where the
conversation hangs in the

silence as people search for the right words to agree with one another and it's all you can do not to shout "I'm right here!"

The woman, from Los Angeles, was already midway through a tale of her long, long battle with cancer when her friend piped up, "You know, you're just like Mitt and Ann." I wasn't sure quite what she meant - "Just like them" is usually a pretty

tricky thing to read - but she meant it in a way that had no intention of offending or attacking, just drawing attention to the similarities that, to her, are so clearly there. Someone else piped up, "Wait, wait, wait - did she actually say that?" And the room erupted into giggles. I laughed with the others. "Yeah, she just said it," someone else

said. "Say that again, we're not going to believe you." It struck me that not only did I have the same reaction as the room to the words of the woman who said them, but I had the same reaction as so many others that, if I hadn't been standing on a stage, I would have risen up from the table and announced, "He's not an engine of our country. He's a cancer on

our politics!" The room erupted into giggles. I laughed with the others. "She just said it," someone else said. "Say that again, we're not going to believe you." And after thinking about it some more, and having

Translate.Net is a software
application designed to help
you perform various
translations to and from a wide
range of languages. This proves
to be pretty useful especially if
you need to translate different
foreign documents and emails,
stay in touch with your foreign
friends, or learn new words.
Once you run the application,

you are required to select the source and target language from a preset list. However, if you skip this step, you can always configure these options from the “Profile” section. The user interface is plain and offers quick access to the configuration settings pane, where you can select the translation service (e.g. Google Translate), output languages

and subjects (e.g. Art, Business, Informatics, Medicine, Philosophy). Unfortunately, the application doesn't allow users to add a file to the list, so in order to carry out the translation process you are required to copy and paste the text. Moreover, you can show the direction of translation, highlight untranslated words in red, manage multiple user

profiles, and others. The generated translations cannot be exported to a file, but they can be copied to the Clipboard. During our testing we have noticed that the program is able to display the translated text quickly and without errors throughout the entire process. All things considered, Translate.Net can give a hand if you are looking for a simple

way to translate your text.
Although it cannot be considered the most powerful translation tool on the market, it's easy to work with, and the portable version of the program can be found here.
