It is based on the idea of a different approach to obtain the required bandwidth for the downloading and uploading of files through the optimization of network traffic in the form of different complex technologies. It is the most robust and flexible web-browser for Mac. The user interface is extremely easy to follow and all tasks can be easily performed through it. The browser has a variety of features that make it a great web navigation tool. MultiMac File Manager is a new Mac alternative to the MacFileMgr. It works as a network manager tool and is useful for the users who have multiple computers in the network. It has a built-in File Sharing application and shares the files between all the connected network computers. It is free, open source, portable and comes with a clean interface. There are no visual differences between the normal and the new default browser. If you wish to use the new default browser, just install it and it is ready to use. The software uses a lot of free space and can store a lot of bookmarks, favorites and proxy information. It is a stock app that comes with Mac OS X. You do not need to purchase it if you already have it as the stock file manager comes with the default installation of Mac OS X. The app is easy to use. It is fast and works for most of the users.
