I have been reading that the scala libs are not included in the runtime.rb and we need to specify them in appengine-web.xml. Can someone please explain the logic behind the same? A: I think you are talking about java libraries that are part of the Scala runtime. They are not included in the runtime.rb, so you still have to include them in appengine-web.xml. Q: Undesired behavior of JQuery Datatables which wraps checkbox selection I am using Datatables with JQuery. I am new to the library. The library has a very useful feature to "Add / Remove" rows when you click on the button. It works when rows are added, but if I want to remove rows - uncheck the checkbox - I am not able to do that. How can I stop selecting rows when I uncheck a checkbox in the datatable. So what I want to do is - I start with a datatable, and I want to be able to select rows at will, but I also want to be able to select a row if I want it to be removed. In the below example - I started with data which have a checkbox in each row - and as I uncheck - this checkbox is still checked and I am not able to uncheck it. What am I missing? A: I'm not sure if you want to remove the row or not, but if you remove the data-checkbox you should be able to remove the checkbox by clicking on the checkbox again. You could add this to your table: This will make a tr element without a checkbox. If you want to remove the row then just remove the data-checkbox attribute. I was released Monday night from the hospital and I want to thank every one of you who helped me during that time. Most

I need to update the Apple Watch app with Watch Connectivity that I developed. In that app I've implemented a dedicated web server that provide some data. If I build my app on a watch extension template, the dedicated web server will be removed. Can I get my app built with the Watch Connectivity template, but then convert it to run on my Watch? A: You can convert your Watch Extension to watchOS app but you can't convert it to Watch Connectivity app. The reason is simple, your Watch Connectivity app doesn't use an extension at all. If you need to use a dedicated web server, there is a couple of alternatives : Service Extension : it is actually similar to watchOS app, it have a UI that you can refresh from InterfaceController Functional Extension : it is actually the same as your Watch Connectivity app (i.e. you can use it like your Watch Connectivity app), you just need to add it as Apple Remote app. Q: Treating sin(x) as x I'm reading this article on the phenomenon of "bad" trigonometric functions. Some of the examples are : The graph of $\sin(x)$ is the dotted line in the graph below. This means that $\sin(0)=0$ or $\sin(1)=0$. The graph of $\sin(x)$ has a kink at $x=\pi$, but \sin is still defined for all real numbers. This means that $\sin(\pi)=0$ or $\sin(x)=0$ for all x in the open interval $(0,2\pi)$. So, to what extent can we treat the sine of a number as just being the number? A: The first one is just the definition of sine being a periodic function of period 2π with values -1 and $+1$. The second one is wrong because $x=\pi$ is outside the interval $(0,2\pi)$.
