Version history In 1981, Cad-Bots was introduced to the market, the first commercially sold CAD software. CADBOTS is today Autodesk's middleware for creating and running custom applications. The first CADBOTS applications included Rendering, Floors, Walls, Windows, Rooms, Phasing, Surfaces, Rebar, Steel Construction, Fire and Thermal, Structures, and Drawing. AutoCAD's roots lie in the system design and drawing program Inventor, which was released in 1992 and is still sold by Autodesk. In 2000, Autodesk re-released CADBOTS as AutoCAD LT (or AutoCAD Studio), which was made available on both the PC and Mac platform. AutoCAD LT was one of the first tools to support user interface and other improvements for the tablet PC. Also in 2000, Autodesk released AutoCAD R14, a wholly new, integrated graphical user interface for drafting and architectural design. In 2005, Autodesk re-released AutoCAD LT with a new feature set that retained much of the previous interface for tablet PC users. The new interface was called "AutoCAD Home and Student". In 2008, Autodesk re-released AutoCAD LT as AutoCAD LT 2008 with its first major product interface update

since AutoCAD R14. The new interface was called "AutoCAD LT". AutoCAD's XL (architectural and engineering) was also re-released in 2008 and integrated into AutoCAD LT. AutoCAD has a number of ways to store drawing information. It supports both single-document and multi-document databases for storing large numbers of drawings and other files. The database is separate from the drawing file and thus can be updated without overwriting existing drawings. AutoCAD LT was officially released as part of AutoCAD 2010 on September 15, 2009. AutoCAD 2015 was officially released on September 1, 2014. Autodesk has announced that AutoCAD LT will become the default drawing program for Windows 8 in the Fall of 2013. It will become the default drafting program for Windows 10 in the Fall of 2015. , AutoCAD 2017 version is R18. The new AutoCAD 2017 version brings the previously delivered projects to their final stages of development. It includes improved areas of 3D-design, content creation, drawing and annotation, and collaboration, as well as updated features that strengthen the af5dca3d97

Recent trends in the management of adolescent idiopathic scoliosis. A review of the literature regarding management of adolescent idiopathic scoliosis (AIS) was performed to determine trends in the past 30 years. The prevalence of AIS has increased. External bracing remains the most effective treatment. The ideal brace remains unknown, as does the ideal timing of bracing and how to best monitor patients. A curve progression in the brace has been used as the main measure for brace effectiveness. Recent literature has included a new measurement of progression that does not incorporate brace wear. In an analysis of the database of the Scoliosis Research Society, combined with two other databases, only 14% of patients had an adequate postbrace follow-up. The indications for surgery have expanded. The rates of fusion have decreased, with a decrease in the indications for fusion in patients with an end-stage curve. The rates of the use of pedicle screw fixation have increased and the rates of correction of the deformity have also increased. Surgery for AIS is used far more in young adult patients and a longer pre- and postoperative rehabilitation is common. The combination of inpatient and outpatient therapy is now standard. The optimal timing of surgery is still unclear. Bracing can control the progression of the curve and improve function. However, bracing does not halt the progression of the deformity. A progression in the brace is often used to judge brace effectiveness. We have shown that this is not a reliable measure of brace effectiveness. Recent literature has been able to analyze the database of the Scoliosis Research Society with the use of new measures of progression. New measures of progression of AIS have been defined.SEOUL (Reuters) - South Korean President Moon Jae-in said on Tuesday his administration would soon hold talks with Japanese Prime Minister Shinzo Abe to see if Seoul's free trade agreement with Tokyo can be completed this year as originally planned.
