A brief history AutoCAD is the most popular choice in the CAD industry for professionals and hobbyists alike. It is a widely used software program for 2D and 3D drafting and design. AutoCAD's history is similar to that of other popular CAD applications. Autodesk's predecessor, AutoCAD's roots go back to 1982, when it was developed by a team at Xerox PARC in Palo Alto, California. A version 1.0 was released in December 1982. At the time, the personal computer was still in its infancy, but the Autodesk team developed a powerful drafting and design application based on the Apple II and released it as AutoCAD, in an attempt to capitalize on the emerging personal computer market. Since then, AutoCAD has become a staple in the design and drafting community, and is the most popular CAD program in use today. As well as a desktop app, it is available as a web-based product and mobile apps for Apple devices. The 2012.2 version of AutoCAD LT provides similar automation functionality via LISP scripts. It is a free add-on for AutoCAD LT 2013. In the 2015 version, a free package was offered that includes LISP. In 2007 AutoCAD was purchased by Autodesk. As of 2015, Autodesk's AutoCAD does not support LISP any longer. LISP (Visual LISP) Visual LISP is AutoCAD's interpreted LISP scripting language, which first appeared in AutoCAD on a Mac OS in 1994. Visual LISP allows the user to create applications by typing statements. Visual LISP programs are compiled in a separate step. The Visual LISP code is then interpreted by AutoCAD. The Visual LISP language syntax is very similar to Unix shell scripts. LISP (Visual LISP) functionality was deprecated in AutoCAD starting with the 2008 version. Visual LISP is now only available for older, unsupported versions of AutoCAD. X++ X++ is a proprietary, more capable, version of Visual LISP developed by Autodesk. It allows the user to create and execute AutoCAD macros, which can be called from the command line or from within a Visual LISP program. X++ was first introduced in AutoCAD 2004, and has been upgraded several times since. X++ also includes a GUI scripting tool known as the Language Development Environment or, abbreviated, LDE. In the 2008 version, it was replaced by ObjectARX. As of AutoCAD 2012, X++ is a no longer supported feature. Autodesk has removed all of the X++ code in their latest release of AutoCAD. ObjectARX ObjectARX is AutoCAD's macro language, introduced in AutoCAD 2010. ObjectARX was created as part of the previous LISP program, and is completely compatible with Visual LISP, but ObjectARX allows the use of visual cues and AutoCAD's native workflow. It was available in AutoCAD 2010. The AutoCAD 2010 and AutoCAD 2011 teams collaborated to develop a new, pure LISP version, called ObjectARX, for AutoCAD 2012. Unlike Visual LISP af5dca3d97
