Operating systems AutoCAD is available for macOS, Windows, and Linux. AutoCAD LT is a version designed for the Microsoft Windows operating system. Discontinued products ABIX also offered a version of AutoCAD called AutoCAD Graph, initially released in 1998. It was discontinued in 2003. AutoCAD Architecture, released in 2001, was aimed at architects and used the same graphical interface as AutoCAD LT. It was discontinued in 2002. Another product for architects was AutoCAD Civil 3D. It was released in October 2001 and discontinued in November 2011. In 2001, ABIX introduced an alternative to AutoCAD LT, AutoCAD Complete. Trial versions of AutoCAD 2007 and earlier had an "AutoCAD P2P" version for sharing drawing files. These trials were discontinued in early 2014. In October 2015, ABIX announced a beta version of AutoCAD Architecture, marking the return of AutoCAD to the 3D realm. AutoCAD 2016 has a plugin architecture in an effort to facilitate third-party creation of plugins and add-ons. Third-party plug-ins for AutoCAD are also available. In October 2017, Autodesk rebranded and relaunched AutoCAD with the 2020 release, including an overhauled user interface, new rendering engines, and a refreshed user experience for both AutoCAD and the cloud-based AutoCAD 360 platform. The redesigned interface features a three-paneled window that can be rotated and pinned to fit the user's screen layout, a new Project Center that serves as the hub for all your project information, and a revamped "Drawing" window that incorporates file drag and drop, with command panes on the right-hand side. The cloud-based AutoCAD 360 platform is a subscription-based subscription service that allows AutoCAD users to access their drawing files from anywhere and at any time. The company's new cloud-based design tools for AutoCAD are available for free to professional designers, and provide live collaboration among all members of a project. They can also be downloaded as an offline app for Android and iOS. Operating systems AutoCAD is available for Windows, macOS, and Linux. It is also available as a part of AutoCAD 360. AutoCAD 360 can be accessed from a PC, Mac, iOS, or Android device. Manufacturing af5dca3d97

Q: Unit test Singleton classes If I have a singleton class: class Singleton { public static Singleton instance = new Singleton(); private Singleton() { } } Is there a clean way to test that its constructor was called? Since I cannot just create an object of type Singleton from my unit test code, I thought about replacing the constructor with a private, abstract method, but it seems that all the testing frameworks out there require you to specify an abstract method (or do this explicitly by overriding the constructor in the base class). A: A unit test should be isolated from the production code. So, from this point of view the only thing you can do is to mock the static variable. Other than that, I'd say you don't need to test the constructor in a unit test. In your design, I'd suggest to use dependency injection. You'd then be able to replace the static field by a mock/stub. A: The only reason you would want to test the construction of an object is if it has significant side effects that cannot be easily captured by a unit test (or if you are testing a factory/builder pattern). Since this is a Singleton, I assume that the instance is not used for anything significant (at least not significant enough to warrant a unit test). If you want to verify that the class is properly initialized, you can do so by calling getInstance() and calling the getInstance() method you are writing. Q: Is there a way to define different notification tophits in notification bar using notification manager I'm using the notification manager to update the notification in a chat box with a chat service (Googles C2DM). What I would like to know is if there is a way to have different tophits for each notification (specific to the service you use for notifications). Currently, I'm setting the tophit for each message to a bitmap so that it is clear which bitmaps I'm trying to set. I was thinking if I could do it using the colour code for each notification. A: No, I don't believe there is a way to control the notification's tophit. What you are doing is probably the best way to go about it. [Interleukin-
