AutoCAD (2022)

AutoCAD is a very widely used software package, available for purchase as a desktop or web/mobile application as well as a subscription service. In 2018,

a total of 30,129,000 licenses were sold worldwide. Over the course of the last 12 months, AutoCAD revenue (both desktop and subscription) totaled \$1.16 billion. In 2019, the total was up to \$2.14 billion. Marketing and sales approach AutoCAD is available to the public as either a desktop application or a subscription service. The desktop application is sold primarily to commercial and small business users in the

United States and Canada. The pricing structure for the subscription service is similar to that of other subscription services such as Microsoft Office 365, Pro/Comm, and Adobe Creative Cloud. Licenses can be purchased at a discount on a subscription basis. The price of an annual subscription starts at \$800 CAD or \$600 USD. An upgrade from a desktop to a subscription license can be charged at the prevailing fee. AutoCAD

was originally a desktop application only, but in November 2000 AutoCAD LT was released as a rival.

AutoCAD LT was a low-cost version of AutoCAD designed for the budget-minded, and does not include the same level of functionality. For example, the history feature is not available. AutoCAD LT is now a web/mobile application, available as either a desktop or subscription license. As of May 2019, AutoCAD LT is

only available to companies with fewer than 100 employees, or to private individuals who purchase the license through AutoCAD.com. Both AutoCAD and AutoCAD LT run on Windows 7, Windows 8, Windows 8.1, and Windows 10. Prior to Windows 10, the application was compatible with Windows XP. AutoCAD LT runs on older versions of Windows up to Windows 7. AutoCAD LT is also available for Android and iOS, but as of

2019, the company is working on an update to the app to take advantage of the new features in AutoCAD for Windows. AutoCAD has historically enjoyed significant popularity and goodwill. The AutoCAD logo appears on about 75% of the products manufactured by the top 100 automotive manufacturers. This includes cars, trucks, and commercial vehicles. The AutoCAD logo also appears on commercial aircraft. In 2007, Gartner

published the "Top 25 CAD Software Solutions". In that year, Auto

The connectivity of Autodesk applications to other services is called the AutoCAD API, which supports OLE, web services and SOAP. AutoCAD applications can be accessed over web, DDE, or DDE/RPC.

The DDE/RPC protocol provides a mechanism for communication between

Autodesk applications and other applications (third-party or proprietary).

Autodesk's Component Object Model (COM) (Delphi, C++) is also used to access

This is called "design intent". AutoCAD supports a number of file

formats: DWG, which is most commonly used in the architectural and engineering industry. DWF, a lightweight document standard that supports PDF and PostScript. DXF, a common standard file format used by a number of software products. It supports 16-bit and 32-bit binary file formats. R14, a .NET based data format used af5dca3d97
