History AutoCAD Activation Code was initially designed for the use of architects and engineers, although it has grown to be used for a wide variety of disciplines, including, but not limited to, project planning, structural analysis, design engineering, mechanical design, civil engineering, electrical design, construction management, architectural drafting and architectural and engineering design, mechanical design and drafting, graphics and web design, as well as landscape architecture. The first version of AutoCAD, 1982 version 1, was developed by Mike Nudelman and the first release of AutoCAD was December 1982. With version 2, 1982-1983 release, the company name

changed to Autodesk. By the 1990s, AutoCAD was widely used in the United States and many other countries. In the early 1990s, Autodesk introduced a new program, AutoCAD Architecture, or AutoCAD-A for short. Its goal was to support many of the tasks typically handled by architects and structural engineers. The program was built as a single application, which meant it could be installed and run at the same time, which minimized learning the program. The first release of AutoCAD-A was in 1990. In 1995, AutoCAD-A was renamed AutoCAD Architecture. The next version of AutoCAD-A, AutoCAD-A 2004, was the last release. After the release of AutoCAD-A 2004, Autodesk changed AutoCAD into a single application that could be run on either Windows or Macintosh computers and

was able to run on most modern hardware. Autodesk's decision to develop the application as a single application has been a major driver for both Autodesk's success and longevity. Design philosophy AutoCAD AutoCAD was developed as a desktop application that runs on personal computers. Autodesk has used the R&D resources of more than 500 people in developing its software. The development of AutoCAD was driven by the need to provide a solution for a problem created by increasing accuracy requirements of engineering programs. Autodesk began work on AutoCAD in 1982, four years after its introduction of AutoCAD Architect. The intent behind the move was to make AutoCAD a "real" CAD application with which an engineer could produce final

design documents and drawings for the engineer's client. The engineer would design in AutoCAD, submit the drawing directly to the client, and receive a printout from the client.
