AutoCAD was the first desktop CAD program to incorporate a structured document, and the last time Autodesk considered making a "true CAD program" that incorporated object-oriented and structured design, function-level modeling, and a visual design environment. AutoCAD 2000 was the first version to incorporate these features. In AutoCAD, a structure diagram is also a text document and is called the Modeling Reference. It is a way to describe the drawing without actually creating the objects. A structure diagram can be created in AutoCAD and saved as a text document. The Modeling Reference file can be imported into AutoCAD. Image courtesy of the Autodesk.com. The Modeling Reference can be displayed as an independent text document (or "tree") with tags (markers) to describe various objects, such as constructors and inspectors, created in the drawing. The Modeling Reference can also be used as a reference for working on an assembly drawing. The following are some of the basic topics to consider when using AutoCAD: To access the AutoCAD Modeling Reference, AutoCAD 2000 must first be installed. This can be done through the installation disc. Open the Modeling Reference file (RR TEXT.OBJ) Open the Modeling Reference file (RR TEXT.OBJ) Run the Modeling Reference file (RR TEXT.OBJ) When you view the file in the tree window, select the Display Control tab and choose Open Modeling Reference in the button at the bottom right of the window. The following figure shows a text document listing the various panels in AutoCAD. These features are covered in this chapter: The navigation panel The sheet panel The Ribbon The window panel Drawings and views The navigation panel In AutoCAD, the panels are the basic window that allows you to view and edit your drawing. In AutoCAD 2007, the panels are called viewports, which allows you to move around in a drawing without losing your view. Each panel can be turned on and off. The panels are: Navigation panel — used to navigate drawings, zoom in and out, change the active view, and select items. Sheet panel -

Q: Why I get "list indices must be integers or slices, not str"? I have a problem with adding columns to dataframe. I've tried: scaler_table = pd.DataFrame([df[0].str.split('_', n=1) for n in range(1,9)]) but I got an error: File "C:\Python34\lib\site-packages\pandas\core\frame.py", line 1894, in __getitem__ return self._getitem_column(key) File "C:\Python34\lib\site-packages\pandas\core\frame.py", line 1896, in _getitem_column return self._get_item_cache(key) File "C:\Python34\lib\site-packages\pandas\core\generic.py", line 1758, in _get_item_cache value = self._data.get(item) File "C:\Python34\lib\site-packages\pandas\core\internals.py", line 2771, in get loc = self.items.get_loc(item) File "C:\Python34\lib\site-packages\pandas\core\indexes\base.py", line 1090, in get_loc return self._engine.get_loc(self._maybe_cast_indexer(key)) File "pandas_libs\index.pyx", line 127, in pandas._libs.index.IndexEngine.get_loc (pandas_libs\index.c:5054) File "pandas_libs\index.c:4829) File "pandas_libs\index.libs\hashtable_class_helper.pxi", line 1658, in pandas._libs.hashtable.PyObjectHashTable.get_item (pandas_libs\hashtable.c:15348) File "pandas_libs\
