Technical Field The present invention relates to a structure of a thin film transistor having a channel region formed of an amorphous semiconductor and a method for manufacturing the same. In particular, the invention relates to a structure of a thin film transistor using a polycrystalline silicon layer as a channel region and a method for manufacturing the same. 2. Related Art As a thin film transistor, a thin film transistor using a polycrystalline silicon film as a channel region is known. This thin film transistor is manufactured using a process in which a polycrystalline silicon film formed on a quartz substrate is thermally treated to form a polycrystalline silicon film as a semiconductor layer in the channel region. In a thin film transistor using a polycrystalline silicon film as a channel region, because the polycrystalline silicon film as the channel region is formed by thermal treatment, at a temperature of about 1000° C., the substrate is damaged and the channel region of the thin film transistor may become unstable. Thus, a thin film transistor having a structure in which a channel region is formed of an amorphous semiconductor is used (e.g., Patent Document 1). [Patent Document 1] Japanese Patent Application Laid-Open (JP-A) No. 2002-174416 However, a thin film transistor having a structure in which a channel region is formed of an amorphous semiconductor layer is not high in

Sometimes, it is a good idea to take the "benevolent dictator" route. The goal of such a move is to maintain the company's image and to attract and keep top employees. If this approach is taken with a touch of humor, managers will have to bear with it, for those who do not see the humor will not be amused.Q: Unable to convert a file using the last command I am trying to create a.tar file using the last command and convert it to.html format.
