The full instructions can be found here: [A: Yes, they're already in there.](#) Starting from AutoCAD 2009, all 3D models in AutoCAD use the DWG file format. That means that Autodesk Inc. has adopted a file format change for all 3D models. To avoid any compatibility issues, the file structure and endian-ness of AutoCAD 3D files is completely different than the DWG files created by older Autocad versions. To avoid having to modify your existing models and make sure they run correctly in AutoCAD 2009 and later, you can easily generate the new key that AutoCAD uses to identify the model versions in AutoCAD 2009 and later. You do not need to change the Model

Extended XML Support: Support XML dialects that are not supported in previous releases: AGL, CADML, DBL, DWG, DWF, EMF, EMX, ESRI, FOR, DXF, GDML, GML, GXF, KML, PDF, PLT, PNT, SVG, and TCX. The latest version of AutoCAD includes rich support for these dialects. (video: 1:30 min.) Added support for many more geometric objects in DWG format. (video: 1:35 min.) Use the NEW TAG to link drawing objects to the corresponding (track or paged) drawings. Previously, this was done by finding the corresponding drawing and then opening the associated drawing. (video: 1:50 min.) New Forms: Format Forms: Quickly format your drawing as a drawing, drawing element, schedule, color, dimension, template, annotative (BTA) object, or annotation. Choose the drawing, element, or attribute you want to format and format it. (video: 1:17 min.) FORM Control: Write code to automate drawing tasks. You can write code to control the AutoCAD® process, modify objects, and even to render images. No macros or programming is needed to accomplish this. Code is written using the Visual Basic Scripting Edition language, the same language you can use to write macros. (video: 1:35 min.) FORM Slides: Visualize the

progress of your work as you work. For example, you can select a block of code and then add one or more slide templates. AutoCAD will display a slide that shows how each block of code affects the drawing. You can build your slides incrementally as you progress through your work. (video: 1:45 min.)

**FORM Results:** Analyze the results of your code. See, for example, whether your code generates the expected result or performs any validations. The results are displayed in a graphical, tabular format. You can also link to external resources, such as Internet web pages or online databases. (video: 1:55 min.)

**FORM Captions:** Add descriptive text to your slides that tell you what you are doing, when you are doing it, and what is happening as you do it. (video: 1:00 min.)
