Grounded (Alistair Bland)US DVD: 13 Oct 2008 Surveyor: The Life and Films of Timothy Hutton I am no longer a fan of science fiction, but there is no denying its central role in Hollywood history. From the beginning, science fiction films have played an important role in the creation of our culture, our language, our perceptions, our political discourse, and ultimately, our scientific discoveries. It's also a movie genre I never tire of watching. The Star Wars franchise has not only set the bar high with its spectacular visual effects and plot lines, but it has also established a classic template for every science fiction film since: Great heroes face against impossible odds while fighting a monstrous villain, in an attempt to save the galaxy. These noble, if unrealistic, goals have been the motivation behind every science fiction film since. It is the genre's defining feature, and the title of Star Wars. One of the most interesting things about this classic formula is that the hero's journey does not end when the conclusion is reached, but instead, the hero and villain of the film have in fact become the foundation of each other's lives. They have become the foundation of our civilization. For instance, Professor Carter is the architect of the entire human race, building it up from the ashes of his own civilization and adding layers upon layers, advancing as man develops his own society. The Spaceborn, his right-hand man, is the perfect soul mate for this in every way. He does not need anyone else, but he is the perfect architect for this huge project. The villain is, of course, The Master, a man who will stop at nothing to wipe out man, but he, too, is not the end. He is the end of what man could be. He is the end of man's independence. He is the beginning of the destruction of our civilization. However, once the hero is no longer just a movie character, the endgame is not to destroy him, but to take him down in order to rebuild him into something new. He must be properly disposed of, but re-purposed to be more useful. In the case of Surveyor, the story of a man returning to his roots on Earth, the villain is The Mind, a man who has not only lost the power to think, but is now eating his own thoughts as well.
