new program with the.Q: Rails +

Devise: Many-to-Many add

polymorphic relation I'm trying to implement a "new article" page in my

Rails 4 application using Devise and

Mongoid. The goal is to have an article with content that can be like a

photo or a video, but also an article

can be something else. To do this, I

tried to add a polymorphic

relationship to Articles, as described here. My problem is that I don't know how to create a polymorphic relationship in Mongoid. The following is the migration and schema I have already:

```
class CreateArticlesAndUsers
  def create
    @articles.each do |t|
      t.references :author, :type => 'article', :foreign_key => 'article_id'
    end
  end
end
```
