Mitochondrial disorders are often difficult to diagnose, especially if atypical presentation occurs. Clinical suspicion is mandatory: clinical signs associated with mitochondrial dysfunction must raise the suspicion of a mitochondrial disorder. Furthermore, a definite diagnosis cannot be made unless mitochondrial molecular genetics is performed. Long-term complications of mitochondrial disorders are life threatening. In the case of metabolic defects, diagnosis is very easy, but the diagnosis of nuclear genes defects is difficult due to heterogeneous clinical signs and because of the lack of ocular disease, which is a specific sign for the majority of cases. Eye manifestations are not specific either. In the same way, diagnosis of neurogenic diabetes insipidus is difficult but the ocular manifestations of the disease allow a specific diagnosis: the treatment must be adjusted very carefully to avoid concomitant medication with diuretic effect.On Sunday, an angry Sean Hannity read a statement from Mitt Romney asserting that Obama "disqualified himself from ever serving as president of the United States." In the weeks before the 2012 election, Romney was moved to use the word "disqualified" in a similar context to describe the fact that Obama did not release his pre-election health records, and had no answer when asked whether he would release them. "In regards to the president," said c6a93da74d
