Efficacy of triple-combination therapy for advanced gastric cancer: results of a multicenter randomized controlled trial. The optimal regimen for chemotherapy in the treatment of gastric cancer has yet to be established. We sought to evaluate the clinical efficacy and toxicity of a triple-combination therapy consisting of a combination of docetaxel, 5-fluorouracil, and cisplatin (DCF) in patients with advanced gastric cancer. Patients with advanced gastric cancer who were eligible for DCF were enrolled in this randomized controlled trial (RCT) from August 2004 to February 2007. Patients were randomly assigned to either the DCF group or the best supportive care (BSC) group, and they were treated every 3 weeks with either DCF or BSC. The primary endpoint of the study was overall survival (OS), and secondary endpoints included progression-free survival (PFS) and safety. One hundred and seventy patients were enrolled in this study, and the median OS was significantly longer in the DCF group (12.9 versus 6.8 months; P=0.001). The DCF group also showed a significantly longer PFS and a higher overall response rate (66.7 versus 48.3%; P=0.001). There were no significant differences in any toxicities between the groups, and the most common grade 3 or 4 toxicities were hematologic. This trial showed a significantly longer median OS than the study comparing DCF or BSC in previous trials of advanced gastric cancer. The DCF regimen was an acceptable alternative to previous DCF regimens or BSC, with similar toxicity profiles.Q: SimpleDateFormat take wrong year I use SimpleDateFormat to parse Date and time from XML.
