Favourite. Dhoom Movie Free Download 720p 7. Download Dhoom movie free 720p 7. Iru Sudhe. Texaco Gold Mine in Arizona The Texaco Gold Mine is an open pit gold mine located in the Coronado National Forest in Maricopa County, Arizona, U.S. Description The Texaco Gold Mine is an open pit gold mine. The gold mine consists of a small complex of open-pit, small-diameter (30- to 50-meter) mine shafts, along with the processing plant and exploration mine. The processing plant is claimed to produce 99 percent pure gold, and the exploration mine was the site of the first discovery of gold since the 1980s, a large nugget found in a streambed. Geology The complex is located in the Goldfield belt and the surrounding aquifers are some of the best in Arizona. The Houston-Edwards Fault, in the northern side of the mine site, is considered to be the most productive aquifer in the region. The Henry fault is located near the southeast edge of the complex and is considered to be the best aquifer in the region. In November 2010, a field sample taken from the top of an aquifer showed a gold concentration of 35 ppb. This was the first gold discovery at the site since the mines closed, as well as the first discovery made in the state since 1960. In September 2013, a sample taken from the mine's wastewater drainage showed a gold concentration of 20 ppb. This was the first gold discovery found in the state since 1964, and the first discovery found in the region since the 1980s. Texaco has also done reconnaissance for additional gold in the area.
