September: ACCA F2 Syllabus 2014 Exam.pdf. July: ACCA F2 Syllabus 2015 Exam.pdf. June: ACCA F1 Study.pdf. BPP ACCA F1 . Stick to the BPP online practice paper and ensure that your notes have been correctly . Study Techniques are an integral part of the ACCA Diploma in Engineering. ACCA has updated the study techniques, this is reflected in the syllabus for all. AN ACCA qualification will set your. The study techniques are designed to enhance student .Risk factors for isolated inferior turbinate hypertrophy: a prospective population-based case-control study. Isolated inferior turbinate hypertrophy (IHT) remains the most common paranasal sinus disease in clinical practice. The incidence of IHT is increasing despite the fact that the etiology of this disease is unknown. We performed a prospective population-based case-control study to investigate the role of possible risk factors for IHT. The study included 203 patients with isolated IHT and 203 age-matched controls. The following parameters were studied: age, sex, affected side, systemic diseases, use of systemic medications, smoking habits, type of employment, family history of paranasal sinus disease, family history of allergy, and previous nasal surgery. A comparison of the distributions of various parameters showed no significant difference. Nonetheless, isolated IHT patients had a higher incidence of concomitant nasal polyposis (26.7% vs. 17.7%; $P = 0.02$). Furthermore, the isolated IHT group showed a higher incidence of previous surgery for allergic rhinitis (14.3% vs. 3.9%; $P = 0.001$). This study indicated that isolated IHT is a common and idiopathic disease. Moreover, increased awareness of the importance of the contralateral nasal mucosa in IHT is warranted. Abstract: c6a93da74d
