Siemens Tia Portal V11 download - Activate - 17Â .California, a state dominated by climate change awareness, has taken further efforts to follow in the footsteps of its two fellow West Coast states, Oregon and Washington, and make its land use decisions more in line with the realities of the changing climate. Last week, the California legislature passed Bill 109, requiring the state to make more renewable energy available to its residents, make

its buildings more energy efficient, and help finance the transition to 100 percent renewable energy, among other actions. Its effect could reach as far as Colorado, Arizona and Nevada. The bill's primary tenets are Siting and Permitting of Renewables and Other Green Energy Projects (SAG) for private sector investment, a 90 percent renewable energy goal by 2030, and investments of $50 billion by 2020 to develop clean energy sources. The bill also establishes a $1.3 billion incentive program to build solar panels on residential rooftops,

and requires local governments to develop policies to encourage living in a sustainable manner. This year, cities and counties in California have passed more than 80 policies in support of the bill's initiatives. While other bills have been passed prior, this is the first major legislative push to set goals for the entire state. California's huge support for renewable energy has often been credited to Governor Arnold Schwarzenegger, c6a93da74d
